

# DIGI-Tablet

Digi-Tablet is an elegant and versatile free standing solution that provides you with great options for either permanent placement or tradeshows and exhibits. Use any 9,7" to 12" Tablet you like and position it in a Portrait or Landscape mode.

The product features a slim housing made in anodized aluminium – allowing it to fit perfectly into any surroundings. The front panels and the bezel frame are interchangeable providing the flexibility to change colours, branded graphics or artwork according to your needs and requirements.

You can even integrate other new tablet versions later on. You simply replace the acrylic frame that holds the device in place with one to fit the new choice of tablet, leaving the rest of the enclosure unchanged. It means that we provide you with a Tablet display that not only looks elegant but it is also one of the markets most durable, secure and flexible systems.
